## 01. MONTFORT CARE

The Montfort Care Early Intervention Programme aims to detect hearing impairment in children during their first year of life and provide timely therapy, medical support, education, and effective integration into society both academically and socially.

As a leading guidance center in their area of operation, Montfort Care raises awareness among the general public and medical community, conducts early hearing screenings, and improves access to therapy, medical treatment, hearing aids, speech therapy, and parent-infant training. Montfort Care's intervention is distinctive in that it addresses all aspects of early intervention and overcomes the obstacles to identification and intervention. Furthermore, the program reaches out to disadvantaged communities and offers these services at nominal costs to make them affordable for economically weaker sections of society in Mumbai.

## 02. ABOUT STEPHEN SCHOOL

Established in 1957, our school has experienced remarkable growth and is now equipped with 12 classrooms, catering to the educational needs of 66 children annually. Our primary focus is to provide comprehensive special education for children with hearing impairment.

At our school, we prioritize creating a supportive and accessible learning environment for students with hearing loss. We understand the unique challenges they face and are committed to addressing them effectively. To this end, we have specially designed classrooms that greatly enhance the educational experience of these students. We take pride in our team of dedicated professionals, which includes experienced teachers, speech therapists, audiologists, and psychologists. Working collaboratively, our team ensures that children with hearing loss receive the personalized support they need to develop holistically.

### 03.

**VISION:** Enabling all children with hearing loss to live to their full potential.

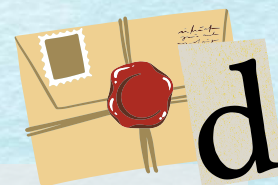

**MISSION:** We enable the early detection and intervention of hearing loss among children through conducting sensitization activities, screenings, and rehab services.

**VALUES:** Trust | Dedication | Innovation | Collaboration

## 04. FROM THE DESK OF DIRECTOR

It is with great pleasure to reflect upon the remarkable journey we have undertaken in the past year and share our aspirations for the future.

As we embarked upon this endeavour, our vision was clear: to ensure that all children with hearing loss have equal opportunities to succeed, transcending the barriers imposed by their disabilities. The challenges posed by the pandemic tested our resilience, but it also forged us into a strong and determined community that learned to thrive amidst adversity.

Throughout the year, we organized a multitude of events, including assistive device workshops, care and maintenance sessions, movement therapy workshops, group therapies, and psychological evaluation support. These endeavours were aimed at empowering parents to actively engage in their children's progress, for we firmly believe that an empowered parent can profoundly impact a child's life and ease their journey.

Our dedicated team of social workers tirelessly collaborated with various organizations, both governmental and non-governmental, to raise awareness about the importance of newborn hearing screening. In our efforts to foster closer collaboration without duplicating work, we invited NGOs to our centre, thus forging new alliances with "FRIENNGO" to further our common cause.

This year, we introduced a new service, CI mapping, as part of our existing program. Recognizing the crucial role it plays after Cochlear surgery, we aimed to provide a comprehensive range of services under one umbrella, alleviating the burden on parents and ensuring that all necessary support is readily available.

In line with our commitment to accessibility, we established a sub-centre in Kalyan, Mumbai, located at St. Jude's School. This initiative was designed to reduce travel time for parents, enabling them to access speech therapy sessions closer to their homes. By making our services more geographically accessible, we have taken a significant step toward ensuring equal opportunities for all children with hearing loss.

Looking ahead to the coming year, we are thrilled to announce that we are in the process of publishing a comprehensive manual, serving as a guide for professionals working in the field of hearing impairment. This invaluable resource will provide deep insights into AVT therapy, enabling professionals to enhance their expertise and deliver optimal care.

In our pursuit of amplifying the impact of our hearing awareness program, we are determined to strengthen our volunteer management program, to achieve a threefold increase in our outreach. Additionally, we have plans to introduce the Parents and Therapists (PAT) program, which acknowledges the shortage of qualified professionals in the field.

By encouraging parents to become therapists, we will provide them with informal training, effectively preparing them for this role. Furthermore, we will motivate them to pursue formal special education courses, thus expanding our pool of dedicated professionals.

In the realm of technology, we strive to enhance our AVT Care app with new and engaging training videos, transforming it into a valuable resource for parents and professionals alike. Furthermore, we are diligently generating and collecting a wealth of data for further research and studies, with the intent to publish our findings in leading journals, thus contributing to the broader knowledge base in this field.

As we reflect upon the achievements of the past year and look forward to the challenges and opportunities that lie ahead, let us remember the wise words of Helen Keller, who once said, "Blindness cuts us off from things, but deafness cuts us off from people." It is our collective responsibility to bridge that gap and ensure that no child is left behind.

We extend our heartfelt gratitude to our donors for their unwavering support and commitment to our cause. Together, let us continue to create a world where every child, regardless of their hearing abilities, has the opportunity to thrive and succeed.

**Ranjith Moovarasu SG**  
**Director**

## 05. FROM THE DESK OF PROGRAM COORDINATOR

We are pleased to present the annual report of our Early Intervention Centre for children with hearing loss. Our Centre has remained dedicated to providing comprehensive services to children with hearing loss and their families, employing a holistic approach that addresses the unique needs of each child while offering support and guidance to parents and caregivers.

Throughout the year, we have reached out to more than 5000 beneficiaries at the grassroots level. We have successfully provided assessment, diagnosis, and early intervention services to over 2600 children with 43 children with profound hearing loss having been taking therapy at our Centre. Our team of audiologists, speech therapists, social workers, and early intervention specialists, have collaborated to create personalized intervention plans for each child.

In addition, we have organized numerous workshops and training programs for parents and caregivers. Our initiatives "Har ghar hero", "Group therapy", "Parents Programs" are aimed to educate parents on the care and maintenance of assistive devices, communication strategies, development milestones, importance of nutrition and much more. We have provided a platform for all the parents to share their challenging journey with each other.

We are proud to report that our efforts have yielded positive outcomes. Many of the children we have served have shown significant improvements in their communication skills, social interactions, and overall quality of life. We have also received positive feedback from parents and caregivers, who expressed feeling empowered and supported by our services.

We remain steadfast in our commitment to our mission of delivering high-quality early intervention services to children with hearing loss and their families. Moving forward, we will continue our endeavors to enhance outcomes and advocate for the needs of children with hearing loss in our community.

We extend our heartfelt gratitude for your unwavering support.

**Vidhyut Thakore**  
**Program Coordinator**

## 07. OUR SERVICES

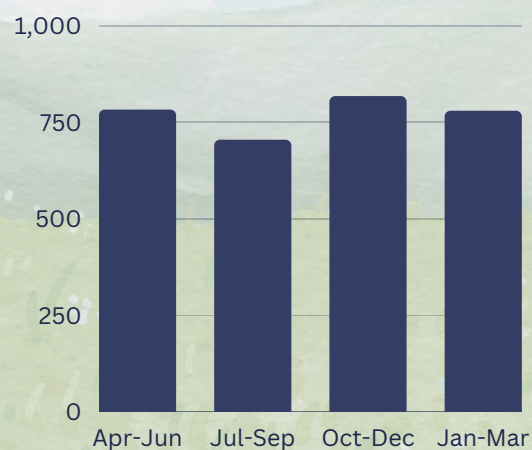

### Awareness Camps on "Hearing health"

Our Early Intervention program is dedicated to raising awareness about hearing loss, a disability that often goes unnoticed during the crucial developmental years of a child. Despite the ground level challenges, we are working to overcome obstacles such as lack of awareness, limited resources, and stigma to ensure timely support for children with hearing impairments.

We conduct campaigns aimed at low-income communities, parents, teachers, NGOs, and other key stakeholders. The awareness program highlights the importance of early intervention and provides people with valuable information about the symptoms, causes, and actions to be taken in cases of children identified with hearing loss.

**Chart 1: Areas wise breakup of Hearing health camps were conducted across Mumbai**

**Chart 2: Number of beneficiaries of Awareness camps on "Hearing health" conducted across Mumbai.**

### Highlight

We successfully reached out to more than 3000 direct beneficiaries. We reached out to the rural areas like Kholi village, Uttarshiv village, Murbad, Taloja, kombad pada in the interiors of Arrey colony.

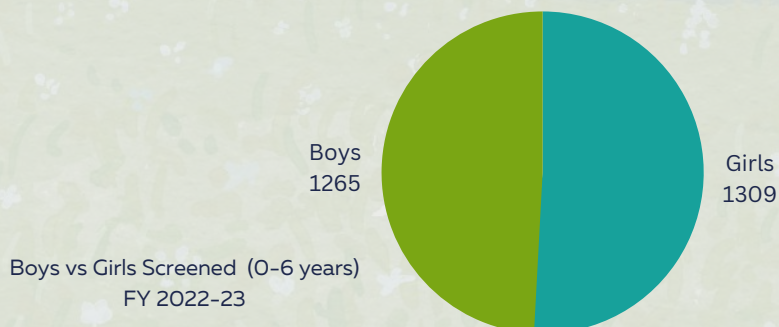

### Key Message

#### Measures to help maintain ear health

- Personal hygiene should be maintained
- Not to swim or wash in dirty water.
- If there is discharge from the ear, keep the ears completely dry (do not block the ear with cotton wool) and seek treatment from a health Centre.
- Do not introduce objects into the ear, particularly cotton buds. This can cause wax impaction and produce hearing loss, as well as ear infections.
- Herbal remedies and 'ear candles' are potentially harmful and should not be used.
- Avoid exposure to potentially harmful levels of noise at home and at work. When exposure is unavoidable it is vital to wear ear protection, such as ear plugs.

### Hearing Screening Camps

Hearing screenings is conducted for children aged 0-6 years. The screening process, using OAE technology, is designed to detect any signs of hearing loss. We have conducted hearing screenings in government hospitals for newborns and have also successfully screened children in high-risk communities. We provide referrals and guidance to parents and caregivers based on the information obtained from the screenings. This information is then used to develop an appropriate plan for therapy and medical intervention.

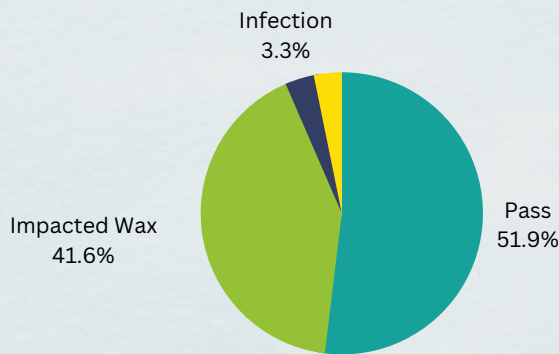

**Chart 3: No. of babies (boys vs girls ) screened for hearing loss across Mumbai**

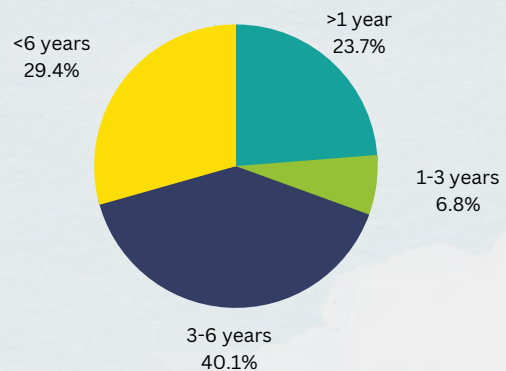

Results of Hearing Screening  
FY2022-23

**Chart 4: Results of the hearing screening conducted on children (0-6 years)**

No. of Beneficiaries  
FY 2022-23

**Chart 5: Age wise breakup of children screened for hearing loss.**

### Highlight

A child should be screened for hearing loss before 1 month of age. Montfort Care screened more than 2600 children (0-6 years) and of which 550 newborn children were screened for hearing loss in FY 2022-23.

### Key Message

- More than 35% of children were identified with reversible hearing loss.
- More than 13% of newborn children got referred in reading due to the non-availability of a separate silent room for testing in government hospitals
- All referred children should be tested again within 1 month.
- All the parents are counseled and given development milestones for their child.

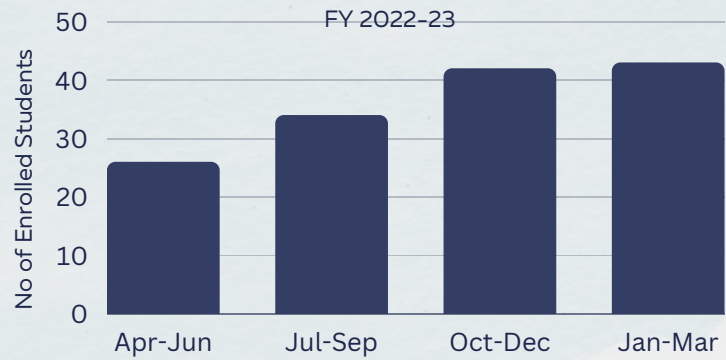

### AVT and Speech Therapy

Auditory- Verbal therapy is specifically catered to the hearing-impaired children and designed to promote learning through listening using their assistive devices. Users of hearing assistive devices need to be taught to become aware of sounds, associate meaning with them and eventually understand language.

This year we have taught 43 children how to hear, understand and express themselves, thus helping in streamlining these children. We worked on therapies that help these children socialize, develop onlooker, associative and cooperative play and in turn improve their adaptability. Moving away from traditional forms of treatment, we also introduced our children to music therapy and facilitated their overall development through water play, puzzles and pretend play that worked on their cognitive, fine, and gross motor development.

**Chart 6: Children taking AVT and Speech therapy at our Centre**

### Highlight

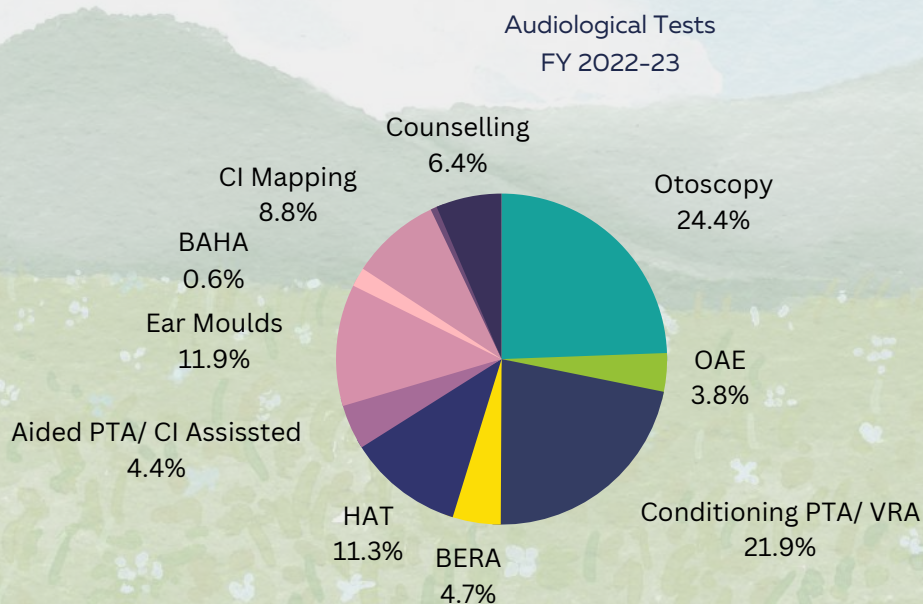

Started a rural support program by opening an extension Centre at Kalyan. 12 Children have been mainstreamed and 9 children integrated to Oral school.

## 08. AUDIOLOGICAL MANAGEMENT

Once a child is found to have a possibility of hearing loss further Audiological Tests are performed. These tests help us to diagnose the type and degree of hearing loss. Once the diagnosis of hearing loss is done, the child is taken up for rehabilitation by fitting appropriate hearing aids

This year we performed an overwhelming number of diagnostic tests 70 Conditioned Play Audiometry, 14 Aided Audiometry, 6 immittance, 15 ABR were performed for diagnosing hearing loss for infants less than 6 years. More than 600 OAE screening were done for newborn babies, 36 ear molds & hearing aid trials, 28 mapping sessions, 2 BAHA sessions were taken for the children at our Centre.

**Chart 7: Different diagnostic tests for hearing loss conducted on children (0-6 years) at our Centre**

## 09. SUCCESS STORY – HAMDAN

Hamdan was diagnosed with profound hearing loss at 8 months of age, and his parents took him to Wadia hospital for a check-up. He was fitted with hearing aids at 18 months, but due to Covid-19, his parents had to move back to their village in Uttar Pradesh, and Hamdan missed out on speech therapy. When his parents returned to Mumbai in February 2022, they took him to Wadia hospital, and he was referred to Montfort Early Intervention Centre in April 2022.

During this period, Hamdan's mother was unable to care for him as she was pregnant with a second child. At the Centre, he underwent a complete audiological assessment, and he was given a new pair of hearing aids in June 2022. This time, his father was counseled on continuing speech therapy activities at home, with set expectations for Hamdan's progress. Hamdan also enrolled in pre-primary school, and with the regular motivation and guidance of therapists, his father and he practiced speech therapy activities rigorously. Although Hamdan had multiple behavioral issues initially, with four months of therapy and schooling, he became more social in school, and his cognitive skills improved significantly.

As a next step, Hamdan required a cochlear implant to have significant improvement in his hearing. These implants can be quite expensive, costing close to 8 lakhs for one ear. Montfort Care supported Hamdan's family by networking with hospitals, assistive aids companies, and ENT doctors, which helped them get a fully sponsored surgery done in January 2023. The implant was switched on in February 2023, and his mapping and therapy continue at Montfort Care.

## 10. ADDITIONAL SERVICES

### Cochlear Implant Mapping

We started Cochlear implant mapping at our Centre. Cochlear implants are electronic devices that are surgically implanted in the inner ear. The mapping is a process that involves programming and adjusting a cochlear implant to ensure that it provides optimal hearing outcomes for the recipient. The mapping process involves the use of a computer to adjust the settings of the cochlear implant to suit the recipient's comfort levels and threshold for different sounds.

### Highlight

Due to our guidance and support, 12 children of our center, got implanted this year. With the efforts of our team, regular mapping, and therapy sessions all our implanted children are enjoying improved hearing, communication, and quality of life.

### 56 Hearing Aids have been distributed

### BAHA counseling and support services.

### CI Mapping

### Psychological Assessment

Special children fall behind, mostly in all areas of development. Psychological Evaluation is important as we get to know the cognitive ability of each child and also gives a direction for our therapy and academic goals. Ms Lea Menzis is a clinical psychologist and has an experience in school psychology, psychological assessments, and mental health. Her interest and passion to work with special children and her commitment to bring about change is unparalleled. MCEIC and Ms. Menzis have collaborated to provide scientific assessments to the special children at a very affordable cost, within the premises.

## 11. PARTNERS IN PROGRESS

### Collaborative Learning

Collaborative learning provides a sense of belonging and acceptance, as they are able to interact and work with others who have similar challenges.

### Orientation Program

A parent orientation program was conducted by the Montfort Care team. The aim is to make parents familiarized with the rules and regulations of the Centre, teaching methodologies, aids, and support available for them. The philosophy behind this orientation program was also to expose the parents to the need of healthy eating habits for children with special needs. Nutrition plays an important role in overall development of the child. Healthy child will be regular, active and will have lesser mood swings. We coached the family members in visual and communication strategies using food as a medium.

## Har Ghar Hero

Montfort Care hosted a successful Parent Orientation Program on August 20th, 2022, with the aim of encouraging fathers to take an active role in their child's therapy. The program, titled "Har Ghar Hero," focused on educating fathers on their vital role in the rehabilitation process. The event was filled with interactive role plays and a Q&A session that provided a basic understanding of the journey of a special child. The focus was to emphasize the significance of parental involvement in a child's progress and to inform parents about the proper care and maintenance of hearing aids. 21 parents participated, making the program a resounding success.

## Parents and Therapists (PAT program)

We have initiated a PAT program wherein we are coaching parents on how to effectively participate in their child's therapy. The parents are encouraged to conduct sessions under the guidance of the therapist. Thereby parents are equipped with the knowledge and skills to support their child's therapy at home, they can provide additional opportunities for learning and reinforce the strategies and techniques used in therapy. We see a significant impact on the child's progress and overall well-being.

## Group therapy

The group therapy sessions focus on the development of language, audition, cognition, motor skills, and imitation skills. We celebrated World Music Day with the objective to develop all suprasegmental (intonation, pitch, rhythm) aspects. Musical chairs was played and children explored different musical instruments. and learnt appropriate vocabulary.

Rainy Day group activity was organized wherein we worked on speech imitation, different sounds, one- or two-word phrases. Children learned to discriminate and identify sounds and words. Children recited poems, songs and communicated with others. They learned appropriate vocabulary.

Differentiated instruction specific to children's learning style and abilities ensured that they fully participated and contributed to the learning process.

## 12. TRIPS AND THRILLS

### **ZOO trip**

An educational trip to Byculla Zoo was organized for 70 children and their parents. The goal was to expand the student's vocabulary on wildlife. The therapy team worked on building vocabulary related to wild animals in three different languages. The day was spent reinforcing vocabulary skills, practicing the sounds of nature, and working on social and pragmatic goals.

The day concluded with snacks, laughter, and a shared commitment to making a positive impact on the lives of these special-needs children.

### **Museum Trip 29 November 2022**

A 'creative cultural lab'; this excursion was to encourage discovery, innovation, and creativity. A holistic learning experience that was relevant to hearing-impaired children. An educational visit was organized for all therapy children along with their parents, to Children's Museum. The goal was to build vocabulary through various exhibits, activities, and programs. The museum team along with therapists worked on language goals through puppet shows and storytelling.

All children had a tour of animals, birds, and the reptile gallery. A drawing activity was undertaken which helped children with the identification of colors. A Clay/Pottery making activity was also undertaken giving children an experiential understanding of shapes, sorting, and categorization. It was uplifting, the parents learned new ways to involve their children in fun activities. At the end of the day, the parents left feeling inspired and empowered to make a difference in their children's lives.

## 13. SUCCESS STORY – AYAN

At the age of 2, Ayan Lokhande was diagnosed with hearing loss. His parents, who resided in a village, were unaware of the diagnostic tests required for their child. They eventually sought the help of doctors at KEM Hospital in Mumbai, who referred them to Montfort Care. The audiologist at Montfort Care provided counseling to Ayan's parents on possible audiological interventions and conducted all the necessary diagnostic tests. Two hearing aids were fitted, and Ayan began his therapy sessions for language acquisition.

Ayan started his therapy sessions in July 2022 with limited vocabulary and communication skills. He mostly relied on jargon and gestures to communicate. With scheduled Auditory Verbal therapy sessions twice a week, and regular counseling for his parents, Ayan began to show progress. He started responding to his name, participating actively in games and activities, and even started making sentences such as "Give me a big ball" and "Merry Christmas to all". His social skills improved, and he became much more confident.

Ayan's parents were also provided with counseling on providing a healthy and loving environment for their child. With regular guidance, they began implementing home-based activities to meet the goals set by the therapy sessions. This change in environment, along with the therapy sessions, contributed to Ayan's progress and improvement in his language and social skills.

## 14. LEARNING AND DEVELOPMENT

We encourage and organize various capacity-building programs for the team. Learning and development strengthen our performance, innovation, and employee motivation for achieving long-term success.

- One-day workshop conducted by Cochlear under the guidance of Ms. Jaspal Chowdhary, Habilitation Head of the Cochlear Medical Device. The focus was on various strategies for AVT, academic development, and counseling points for parents and case discussions
- Interactive Masterclass for Professional Audiologists in Cochlear Implant Technology (IMPACT). It is an immersive certification program to help become a certified cochlear implant (C) audiologist.
- AUDITORY PROCESSING DISORDERS: IDENTIFICATION & TREATMENT, Organized with Uncleft.
- Two of our senior therapists attended a 3-month certificate course on Principals of Early Language Development accredited by AG Bell Academy for Listening and Spoken Language.

## 15. SPECIAL EVENTS

### New Therapy Room Innauguration

The MCX team inaugurated our new therapy room on November 30th, 2022. It's a state-of-the-art facility with acoustically treated walls and an array of colorful picture books, toys, and puzzles. The team, which includes audiologists, therapists, special educators, and support staff, were thrilled to see the therapy room in action. The room has a calming ambiance, and the acoustically treated walls help to minimize outside noise. This creates an environment for effective therapy, as children can concentrate on their treatment without any distractions.

### 350th Anniversary of St. Montfort

We commemorating the 350th anniversary of the death of Saint Louis de Montfort, a revered figure in the Catholic Church. All our students participated in coloring and craft activities of various pictures of Saint Montfort. Appropriate goals on language and vocabulary were set and children participated enthusiastically.

### Extension Centre Innauguration

We take great pleasure in announcing the opening of a new Early Intervention extension Centre EICx of Montfort Care at Kalyan.

We have expanded our wings! Montfort Care is working toward inclusive education and our new extension Centre is providing speech therapy for 8 beneficiaries from rural/semi-urban areas of Kalyan. We continue to stand on our promise to maintain the quality of service and deliver speech therapy that our children need.

### Visit of Montfort Provincial

Brother Jaco, Montfort provincial visited the centre and observed the therapy sessions and facilities, he shared his valuable thoughts and vision with the entire team. One of the key focuses of his vision was on inclusive education.

## World Hearing Day – Annual Day

On World Hearing Day on March 3rd, an Annual Day event was organized to promote physical abilities, enhance teamwork and sportsmanship skills, and encourage a healthy and active lifestyle.

The event was a huge success, with both parents and children actively participating in various activities that were organized. The day was filled with singing, dancing, team games, and individual games that allowed the participants to showcase their skills and have fun. The children were thrilled to be a part of the event, and the parents were happy to see their children actively engaging in activities that promote physical and mental well-being.

## 16. NEW INITIATIVES

### Frienngo

Celebrating the essence of collaboration & friendship and we have marked an event in Friendship month- August. We organized our first-ever networking event 'Frienngos 2022'. Different NGOs participated and shared their journey.

### Open Hearing Screening Camp

On the occasion of World Hearing Day, we organized an open house for hearing testing at our Centre. It was a free for all camp, designed to make people aware of the importance of hearing health. Through this initiative, we tested 103 beneficiaries, 12 months to octogenarians, for hearing deficiency, and hearing loss. We counseled and referred them for further diagnostics.

### AVT Care Manual

Montfort Care Mumbai has created a comprehensive manual to serve as a quick reference guide. The guide is designed to help professionals track progress, engage in goal-oriented activities, and provide helpful tips for two years of therapy. It includes a baseline assessment and goal-setting section, making it an easily accessible and compact collection of all support materials required for Auditory Verbal Therapy. The manual is thoughtfully crafted to ensure that it is crisp, well-designed, and user-friendly. It is intended to be an invaluable resource for all those involved in Auditory Verbal Therapy.

## 17. EXTERNAL AUDIT

### External Audit

KPMG is a multinational, one of the world's largest auditing firms. Biannually, they conduct third-party audits. The audit was to ensure compliance with financial regulations and programmatic standards. The audit team from KPMG visited and checked all the data, pictures, and financial reports. The team consisted of three auditors who were experts in the fields of finance and accounting. The team reviewed the financial statements, and other financial documents to ensure that they were in compliance with generally accepted accounting principles

## 18. OUR PARTNERS

Our network of collaborators is constantly expanding to ensure that we can reach as many people as possible. Additionally, we utilize digital media, particularly social media, to broaden our reach and spread awareness to a wider audience.

## 20. WORDS OF APPRECIATION

First time Hearing screening and awareness camp we did for our beneficiaries in various projects at our organization through Montfort care early intervention centre. And our beneficiaries took benefited from it. I would really like to say thanks to the Montfort team for delivering such quality service.

Ranjitsingh Patil  
Health on Wheels project manager.  
Mumbai smiles

The contribution of Montfort Care Early intervention Centre is quite praiseworthy as 'early detection is early solution.' Many individuals will get a roadmap to better coping opportunities in the battle against speech and auditory challenges. I heartily appreciate the efforts of Program Social Worker Abhishek Thorat by illuminating my college students and staff for taking Awareness session on hearing Health which is very sensitive topic.while some may also guide those who have least knowledge about these issue. Thank you for the great initiative!

Mrs. Pooja Kulkarni  
Managing Trustee  
Sou Laxmibai English medium school  
and Jr College, Mulund East

We are really grateful to get associated with Montfort Care Early Intervention Centre as centre's focus has always been on creating hearing loss awareness in communities to drive early intervention and access to timely and proper screenings . The entire team is so collaborative in their approach that they have always shows keen interest in attending workshops and trainings related to audiology and therapy to ensure beneficiaries under their program achieves great outcomes. Congratulations to entire Montfort team in their endeavour of achieving excellence as early intervention centre.

Vrushali Raut  
Area Business Manager-West  
Cochlear India

My child Ovi earlier was not talking or responding. We were very worried about her progress. But, after joining therapy at Montfort Care Centre I am observing the development of my child. Now she has started giving responses to sounds. She has started speaking some small words. I am very happy with the growth of my child. And I would like to say thank you to Montfort Care.

Sunil Yadav  
(Parent of Ovi Yadav)
